

Highest quality engineered  
**TIMBER WINDOWS  
AND DOORS**

## PRODUCTION

---

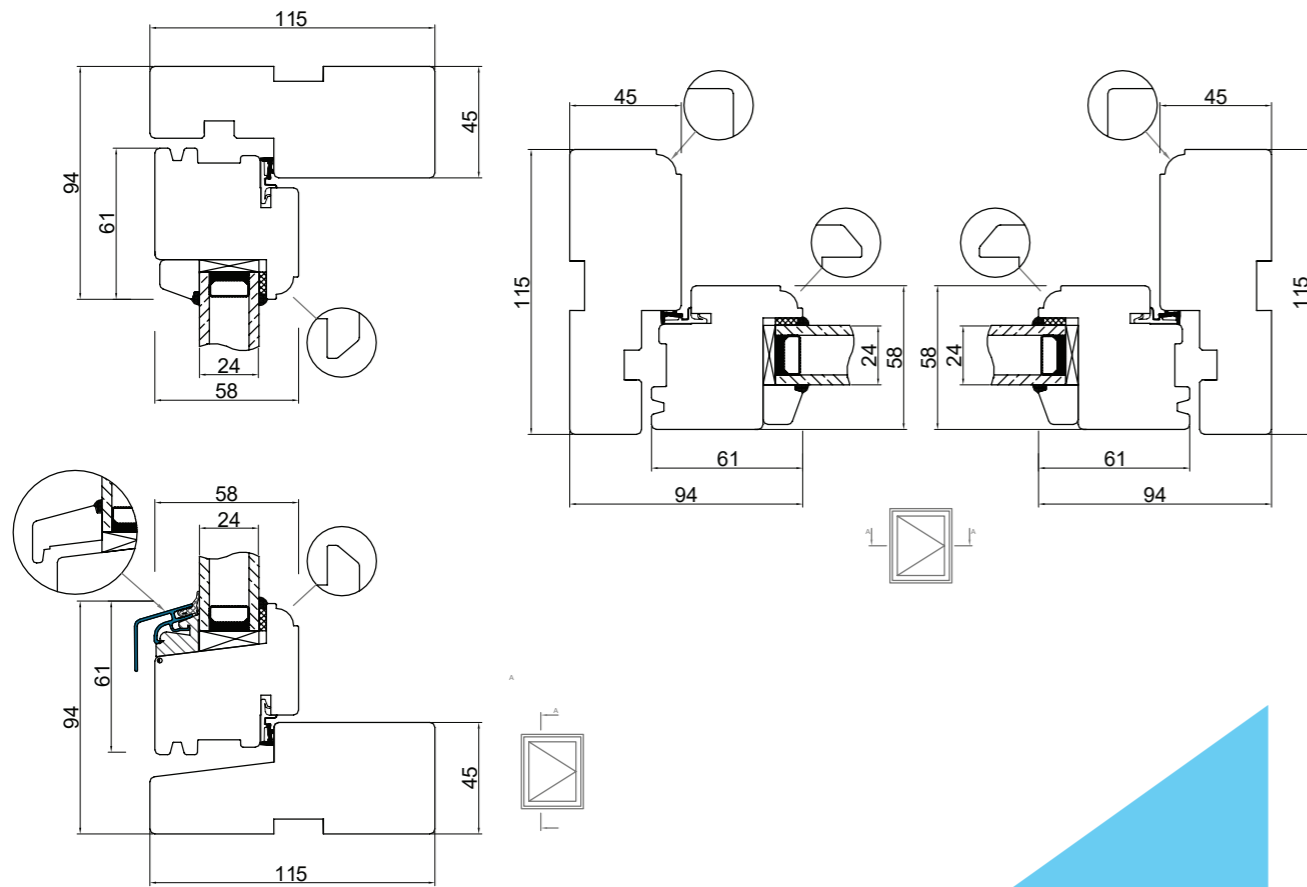

Qualified engineers working in Langvalda can make different kinds of ideas come to life and create spectacular windows and doors in whatever design clients fancy. The innovative and modern production machines that came here from well-known manufacturers of equipment in Europe, enable this company to produce not only standard products but also fulfill complex non-standard projects and architects' visions.

- Min. panel height 1750mm
- Max. panel height 3300mm
- Min. panel width 550mm
- Max. panel width 1000mm

# PACKAGING

In order to ensure the quality of our products until they are delivered to the customer, we have developed packaging that protects the products during transportation. In addition to the main protective function, the packaging also provides an opportunity to communicate more widely about the values of the “Langvalda” company and spread the idea of sustainability: it is clearly visible during transportation and already at the construction site at the customer’s place.

With the packaging, we convey the message to our customers that when they buy “Langvalda” products, they are not only buying high-quality windows and doors, but also contributing to an important mission - replanting forests (we plant a tree for every product purchased).

The qr code on the package invites you to visit “Langvalda” website and learn more about the ongoing sustainability project. In this way, the packaging helps us not only to spread the idea of sustainability, but also to create a more sustainable relationship with our customers.

**Langvalda**

**We won't give up on quality**

- > high quality products
- > technical know-how
- > client focused partner
- > certified products
- > unusual ideas
